

Quick Sort

Step 1: Choose a pivot

Step 2: Find leftmost larger than pivot item

Step 3: Find rightmost smaller than pivot item

Step 4: Swap them

Step 5: Repeat

We see that the index of the leftmost higher than pivot number is higher than the index of the rightmost higher than pivot number. We stop.

Step 6: We swap leftmost higher-than-pivot number with the pivot

Recursively repeat these steps on all sub arrays

SORTED!

The larger than pivot element is swapped with the pivot.
